

Windows 7 Application Testing

Overview

This consulting service will enable your customers to test existing applications and their compatibility to work in a number of differing desktop environments.

This will reduce the traditional manual testing of applications by providing fully automated testing of the applications against thousands of rule sets.

Deliverables

- Service delivered as a remotely via European Packaging Centre
- Receipt of a high level electronic html based report
- Receipt of a detailed analysis report
- 0.5 day meeting to discuss reports and forward strategy

Customer Requirements

- End Customer to provide all applications in an MSI format to a designated ftp site
- Access to a single point of contact either at end customer or reseller

Requirements & Assumptions

- All applications must be in MSI format
- All applications will be tested in one batch
- Customer must confirm when all applications are uploaded and for the service to commence

Key Benefits

- Reduced time to test applications (Gartner reports that Industry standard is 4 days per application for manual testing)
- Thousands of rule set tested against, impossible for manual testing to complete
- Easy to view comparison table where multiple environments have previously been tested
- Leverage Proven Application Testing Experience of Powercube
- European delivery and language capability

Pricing & Packaging

- This service is only designed for volumes of more than 50 applications
- Volumes of less than 50 applications will be charged at the 50 application rate
- Fixed price per application per Environment
- £100.00 per Application / Application Version.

TIMELINE

Offsite

- Email sent to customer from Powercube with ftp account details
- Customer uploads Applications
- Customer emails Powercube to commence service
- Service commences and report delivered with 10 working days for applications of 100 or less

Onsite

- Optional Powercube consultant to discuss report findings
